SOCLA
A WATTS Brand

Description

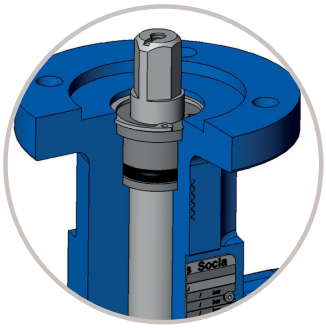

A product which is simple but rich in technology, essential in the chain of fluid circulation. Our butterfly valves bring reliability, a comprehensive range and à high level of safety.

SYLAX BUTTERFLY VALVES

DN 200 up to 350 mm

- Multiple connections: centering lugs, tapped lugs
- Vertical and horizontal operating position
- Interchangeable disc and liner
- Body in cast iron 5.1301, ductile iron 5.3106, steel and stainless steel.
- Body epoxy coated 80µm colour blue RAL 5017 (a lot of other coatings on option, please ask our sales department)
- Wide choice of actuations

SAFETY

> Safety anti-ejection circlip keeps shaft in place and allows easy maintenance

> Safety reinforced by a secondary watertightness

> Spline driven one piece shaft connected to floating disc: high reliability of tightness and torque transmission in the long term.

PROTECTION AND RELIABILITY

> High power transmission with robust grooved connection between the shaft and the disc

> Complete protection of the shaft and valve body from fluids

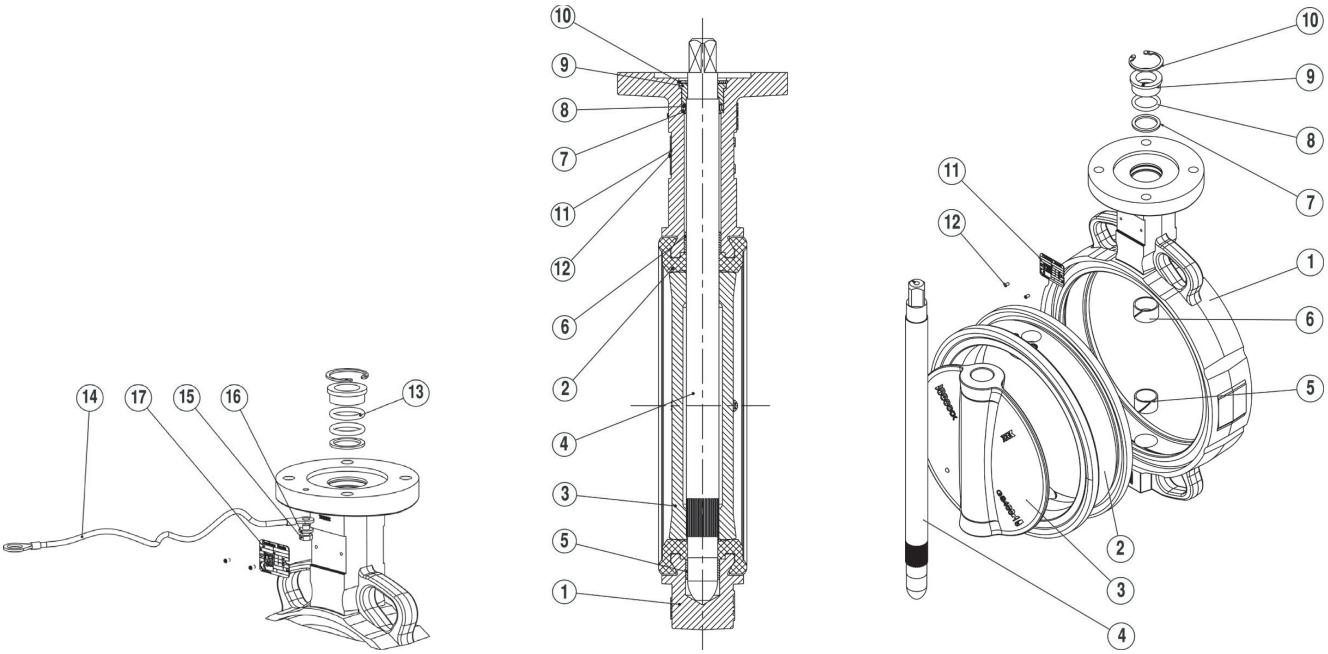

> Reliability of movements with self-lubricating bearings

TRACEABILITY

> Identification and traceability ensured by riveted metal tag (see on page 13)

Spare parts list and materials

SOCLA
A WATTS Brand

Normalisation

DESIGN
According to EN 593 and marking according to EN 19

ISO TOP CONNECTION FOR ACTUATIONS
According to EN ISO 5211

FACE TO FACE
According to 558-1 series 20
ISO 5752 series 20
API 609 table 2

CONNECTING FLANGES (see on page 13)
According to EN1092-1 and EN1092-2
ASME/ANSI B16.5
BS10-d and BS10-e
JIS B2238 and JIS B2239

TESTS
According to EN12266-1
Resistance and tightness of the body: test P11 (1,5 x allowable operating pressure)
Tightness of the seat: test P12 rate A (1,1 x allowable operating pressure)

According to EN12266-2
Anti-static design: test F21

EUROPEAN DIRECTIVES
Our butterfly valves are in accordance to the safety requirements of the following directives:

· Directive 2014/68/UE : Equipments under pressure PED (Pressure Equipment Directive)

Applies to the design, manufacturing and the assessment of the conformity of pressure equipment, the maximum allowable pressure of which is 0.5 bar.

Pressure equipment for water supply, distribution, and disposal of water is excluded.

Depending on the type of pressure equipment, maximum allowable temperature (PS), DN, physical nature of the fluid (liquid, gas or vapour) and the degree of danger of the fluid (group1/2)*, the directive classifies this same equipment into different categories (article 4.3, I, II, III, IV), required for the assessment of conformity with CE marking.

The equipment defined in article 4.3 of the directive must not bear the CE marking.

(*) Group 1: according to rule CE 1272/2008.

Group 2: all other fluids

Important notice : the indicated pressure for the different categories of fluids (L1/L2/G1/G2) is under no condition a guarantee of use. Therefore, it is essential to validate the use of products under given operating conditions. Socla is not responsible for alteration of the products to working conditions not previously specified by the customer. In addition, the operating instructions are available on our web site www.socla.com or by simple request from our sales department.

· Machinery Directive 2006/42/CE

In its Appendix I it sets a certain number of Essential Health and Safety Requirements which must be met. It applies to motorised butterfly valves, (with electric, pneumatic or hydraulic actuators). According to this Directive, these sets are “Partly Completed Machineries” designed for being integrated into a machine.

“Partly Completed Machinery” means an assembly which is almost machinery but which cannot in itself perform a specific application. A drive system is partly completed machinery. Partly completed machinery is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment, thereby forming machinery to which this Directive applies.

Pressure

DIRECTIVE 2014/68/UE EQUIPMENTS UNDER PRESSURE.
Products manufactured in conformity with the requirements of the directive, according to pressure, DN and fluid (see on the precedent page).

LINERS		DN mm	Cat.	MOUNTING	PFA	PS

				End of line	12		12		
		300 - 350	I	Flanges	20		20		
				End of line	12		12		
	Nitrile (except CC333G disc), Neoprene, Butyl, Natural rubber, White natural rubber	200 to 350	II	Flanges	20	20	20		
				End of line	12	12	12		
25 bar	EPDM	200	4.3	Flanges	25		25		
				End of line	12		12		
		250	I	Flanges	25		25		
				End of line	10		10		

ATTENTION
Gas G1 and G2 : The max. pressure is 6 bar when using cast iron 5.1301(EN-GJL-250).

For butterfly valves of category II, the body minimum temperature are as follow :
- **-10°C for cast iron 5.1301 (EN-GJL-250)**
- **-10°C for ductile iron 5.3106 (EN-GJS-400-15)**

NOTE : Butterfly valves of category II used as «end of line», please consult us.

PS: Maximum allowable pressure (in bar) according to Directive 2014/68/UE
PFA: Allowable operating pressure (in bar) for supply, distribution and disposal of water.

SOCLA
A WATTS Brand

Applications

- Water distribution and supply with the main European approvals, water treatment, most of the fluids of general services.
- Industrial applications such as: Metallurgical, mining, paper-making, shipbuilding, nuclear, environmental and mechanical, food industry (see our list of approvals).
- For special applications, especially for particularly difficult media, contact our technical back office team.

Installation

General remarks:

For safety reasons, the installation must take place under the supervision of authorised people taking account of local safety instructions and advice.

The handling of butterfly valves and their controls must be done by staff trained in all technical aspects of their operation.

Before installation the pipes must be depressurised and purged (empty of its fluid) in order to avoid any danger to the operator.

The pipe work must be correctly aligned so that no extra stress is exerted on the valve casing.

Check the compatibility of the connection flanges against the operating pressure: the PN number of the flanges must be greater or equal to the operating pressure.

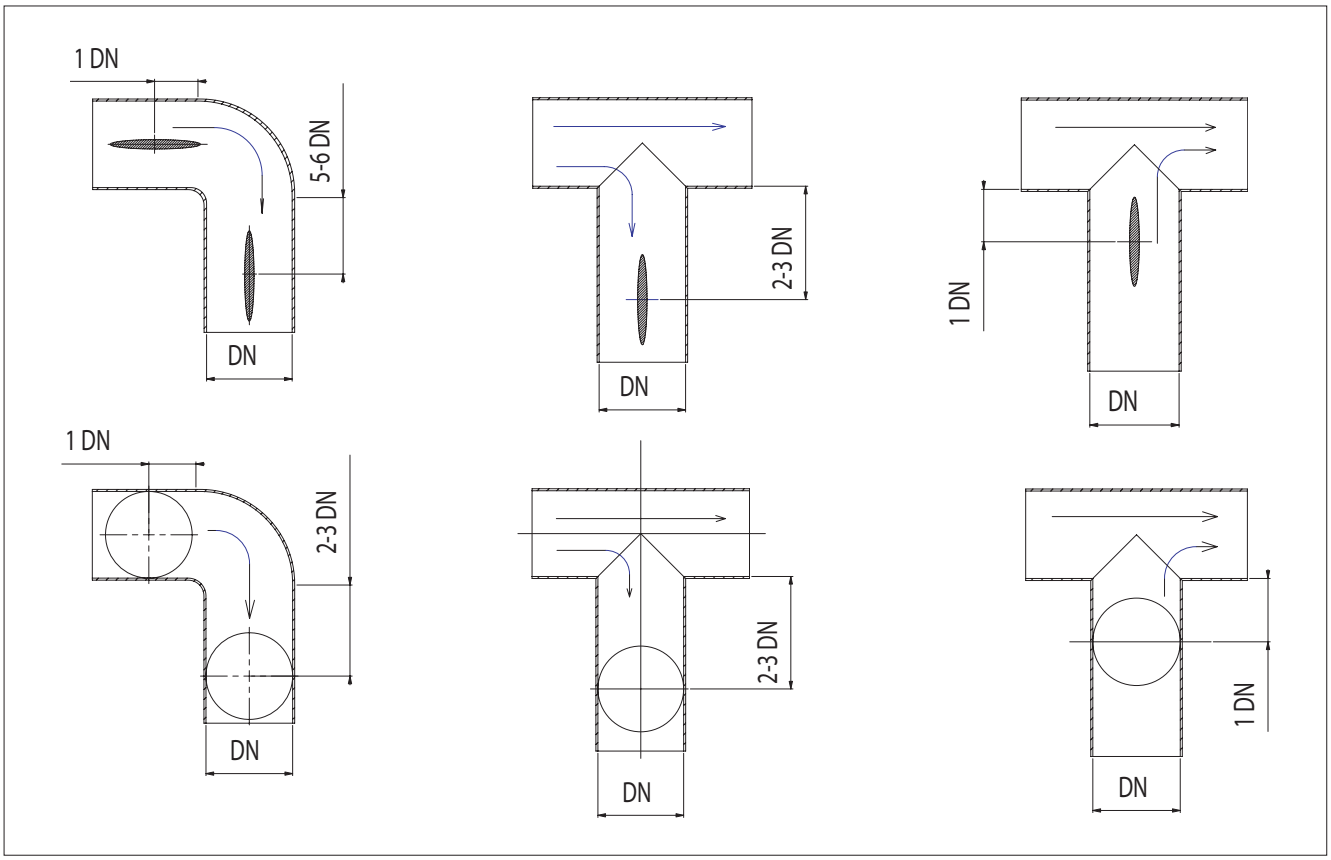

The valve is a machined piece of equipment and must not be used to prise apart the flanges.

An instruction notice specifying the installation characteristics and the commission of the Sylax 200-350 mm is added to every product. It is available on our web site www.socla.com or on request by our sales department.

• Installation conditions :

It is recommended that the distances mentioned below be respected in order to prolong the life time of the valve.

Mounting the valve close to pipe work junctions places it in turbulent zones which increase its wear.

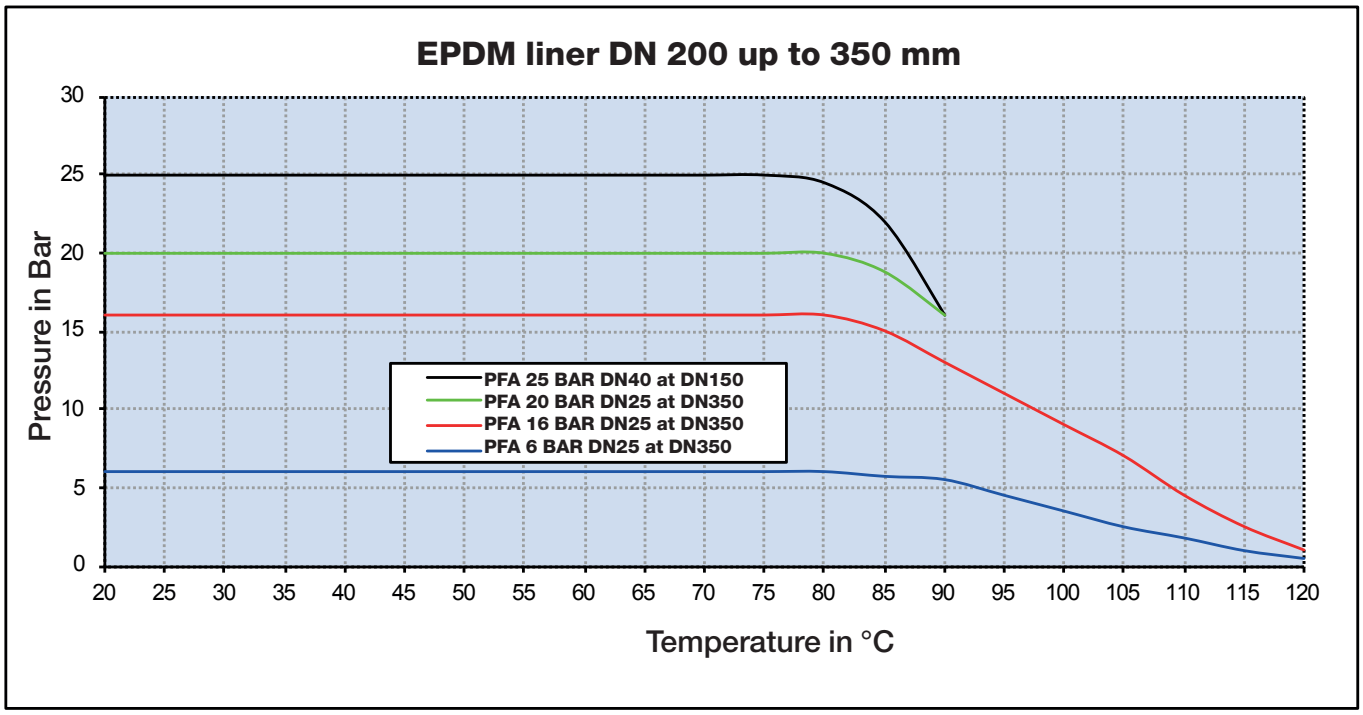

Functionning characteristics

Torque values

Wet torques (Nm)		200	250	300	350
PS6	EPDM	79	101	221	400

NOTE: For every other elastomer, please ask our sales department.

Flow rate (Kv)

OPENING STAGE - Stainless steel disc									
DN	10°	20°	30°	40°	50°	60°	70°	80°	90°
200	15	76	200	399	680	1099	1666	2196	2500
250	40	150	333	621	1084	1765	2452	3517	3948
300	60	219	500	989	1736	2770	4097	5118	5635
350	145	420	882	1676	2850	4462	6000	7431	8520

The butterfly valve is not the best product for regulating Nevertheless, the Sylax 200-350 mm butterfly valve can be used to regulate by an opening stage between 30° and 90°.

A regulation in the opening stage lower than 30° is not advisable because of over speed, cavitation effect, which could damage prematurely the valve.

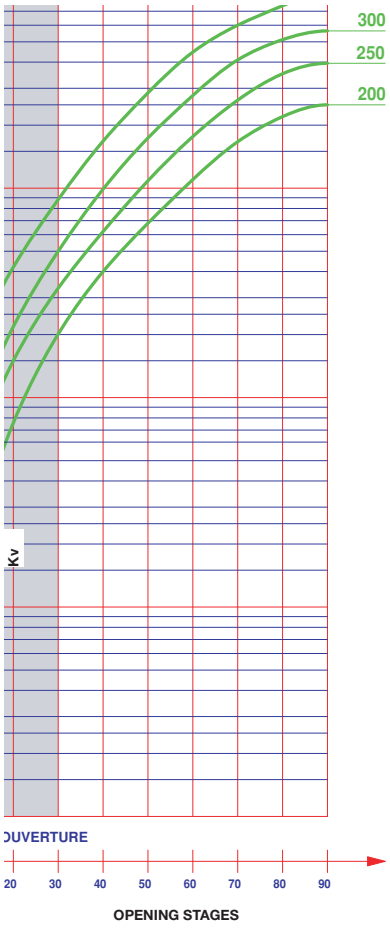

Kv = volume of water in m^3/h through a valve at a preset opening stage and under a head loss of 1 bar.

The maximum flow velocity of the fluid through the valve must not exceed (flow velocities are defined in the NF EN 593):

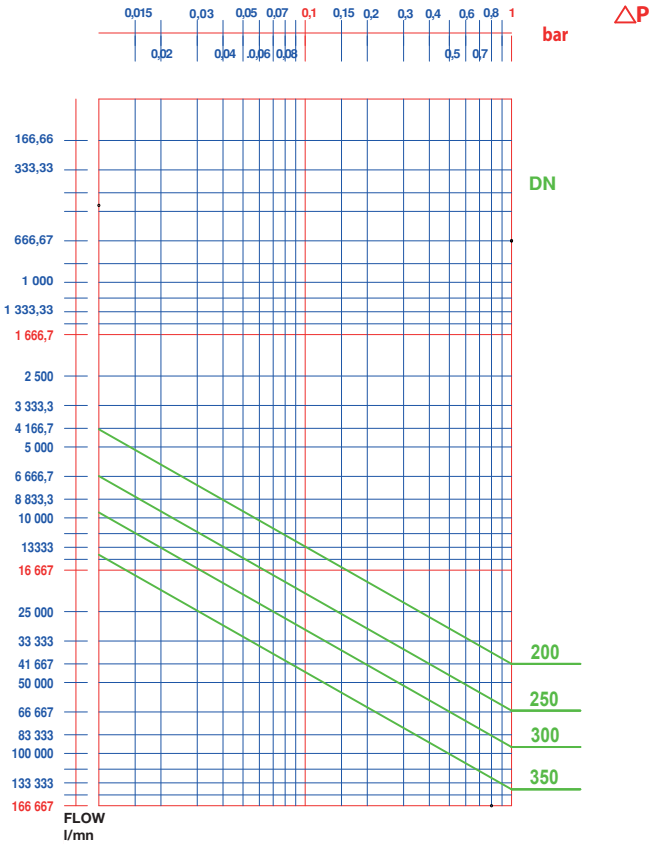

- **3 m/s for liquid fluids.** Between 3 and 5m/s, the use of the Sylax 200-350 mm butterfly valve is possible, but the phenomena of cavitation, noise, vibration and water hammering increase.
- **20m/s for gas.** Between 20 and 25m/s, the use of the Sylax 200-350 mm butterfly valve is possible, but the phenomena of cavitation, noise, vibration and water hammering increase.
- for pulverulent or paste fluids : please consult us.

300	12	●	✔	✔	●		✔	✔		✔	✔	●	●	●

Connecting flanges

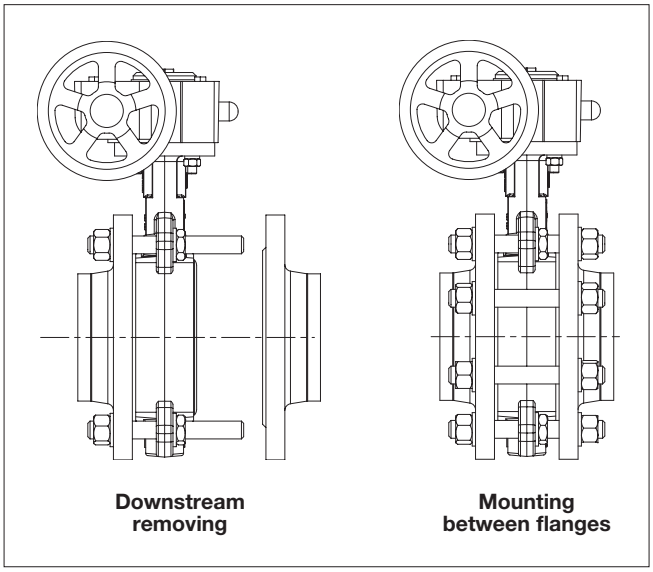

End of line mounting and downstream removing :
End-of-line assembly is done with a flange against.
The downstream removing, at ambient temperature, of the Sylax 200-350 mm butterfly valve is limited to the pressure mentioned on page 5 according to the PED directive 2014/68/UE.

For wafer type bodies with 4 centering lugs, the end of line mounting can be done in the following conditions:

· Ambient temperature
· For water or non dangerous liquids (L2)
· For butterfly valves PFA 16 bar between flanges
· For butterfly valves with ductile iron body
· For butterfly valves with liners in EPDM or High Content Nitrile
· Within a short period (such as maintenance, etc.), 15 days maximum
· In pressure conditions (PFA or PS) such as: see table

DN	PFA or PS (bar)
200 to 300	8

Use hexagon thin nuts between the flange to be dismounted and the centering lugs.

Use washers, wide ones if needed, in order to mount the nuts on the lugs.

The mounting and the removing must be done successively and in opposite way on each nut.

For the mounting, apply a reasonable torque on the nuts, in order not to damage the lugs, until metal-metal contact between flange and body.

For flanges with 8 rods, only 4 are used to maintain the valve in downstream removing; the 8 rods must be re-mounted for a normal use between flanges.

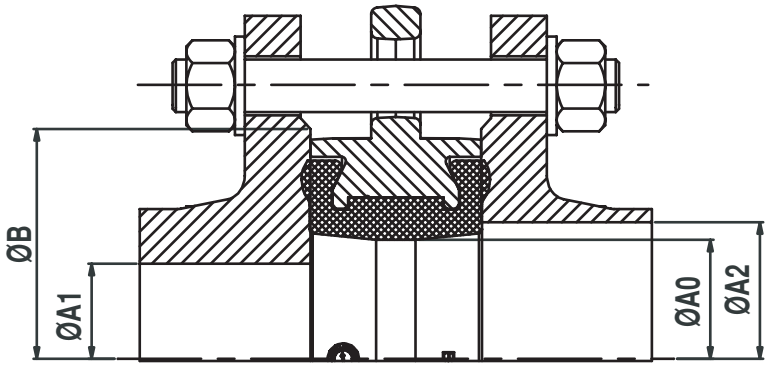

In case of unexpected downstream removing, integrate and screw successively and in opposite way, between the lugs and the flange to be removed, the 4 nuts which hold the butterfly valve.

Type of flange

The Sylax 200-350 mm butterfly valve has been designed to be mounted on normalised standard flanges. Only standard flanges type 11, 21 and 34 according to EN 1092 are quite compatible.

For other types of flanges, refer to the table below.

Non appropriate connections will cancel our guarantee.

NOTE: The use of expansion seals, as well as the use of elastomer coated flanges, between the flange and the valve are strictly forbidden.

Tag and traceability

N°	Description
1	Name of the valve
2	Reference
3	Material of the disc
4	Material of the liner
5	Pressure PS between flanges L1/L2 (liquid)
6	Pressure PS between flanges G1/G2 (gas)
7	Pressure PS end flange L1/L2 (liquid)
8	Pressure PFA water 20°C
9	Pressure PS end flange G2 (gas)
10	Number of manufacturing order
11	Notified Body Number for the Directive PED 2014/68/UE
12	Manufacturing date
13	Connecting flanges
14	Limit of use
15	Approval information zone
16	Marking relating to the Directive ATEX 2014/34/UE

*** WAFER TYPE BODY, CENTRAL FLANGE BODY:**
Assembly by rods:..... Number of nuts and washer = 2 x Number of rods (above)
Assembly by bolts:..... Number of nuts = Number of screws (above) and number of washer = 2 x Number of nuts

*** LUG TYPE BODY:**
Assembly by screws:..... Number of screw per face (above) and number of washer is the same

*** DOUBLE FLANGE BODY:**
Assembly by rods:..... Number of nuts and washers= 2 x Number of rods (above)
Assembly by rods + central nut:..... Number of nuts = 2 x Number of rods (above)
..... Number of washers = 4 x Number of rods (above)
..... Number of thin nuts for central position = 1 x Number of rods (above)

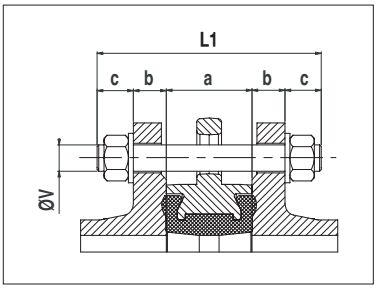

**** ASME / ANSI B16.5 Class 150:**
Standard version: metric threading; UNC threading: please consult us.

For any other template, please consult standards corresponding and use the algorithm hereinafter.

Bolts and nuts

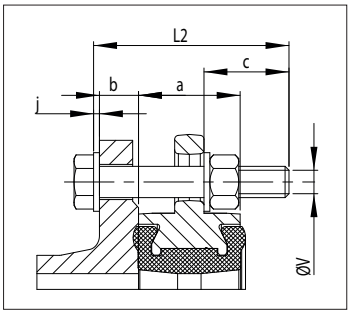

L1 = minimum length of rods
L2 = minimum length under head of screw
L3 = maximum length under head of screw
L4 = minimum length of the threading of the screw

a = width of the butterfly valve (face to face dimension)
b = thickness of the flange (customer)
c = thickness of washer + thickness of nut + exceeding length of the rod
e = maxi depth of screw
j = thickness of washer at the head of the screw

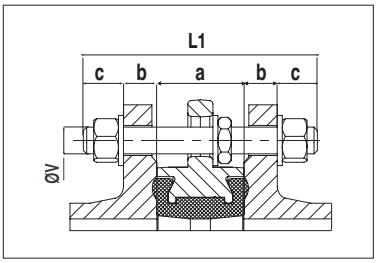

For wafer type and lugs with unthreaded holes type body; assembly by rods:

L1 = a + 2(b+c)

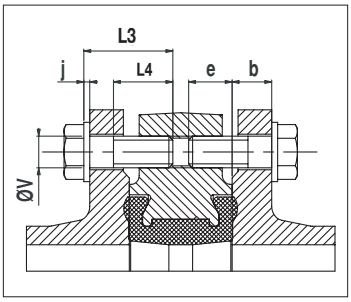

For lugs with unthreaded holes type body (permanent downstream dismantling); assembly by bolts:

L2 = a/2 + b + c + j

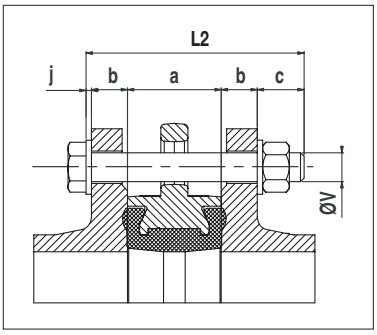

Mounting in case of downstream pipework dismantling (see page 13).

Use hexagon thin nuts between the butterfly valve and the downstream flange.

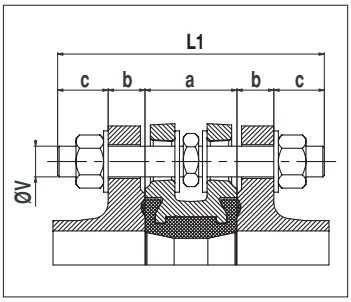

For lug type body; assembly by screws:

L3 ≤ b + e + j
avec L4 ≥ L3 - (b + j)

For wafer type and lugs with unthreaded holes type body; assembly by screws:

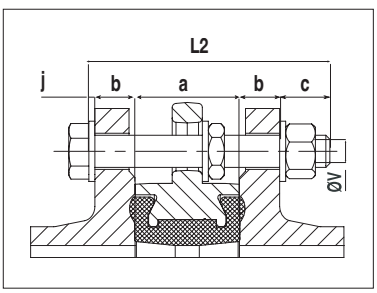

L2 = a + 2b + c + j

For double flange body; assembly by rods:

L1 = a + 2(b+c)

Note: Use hexagon thin nuts between the flanges.

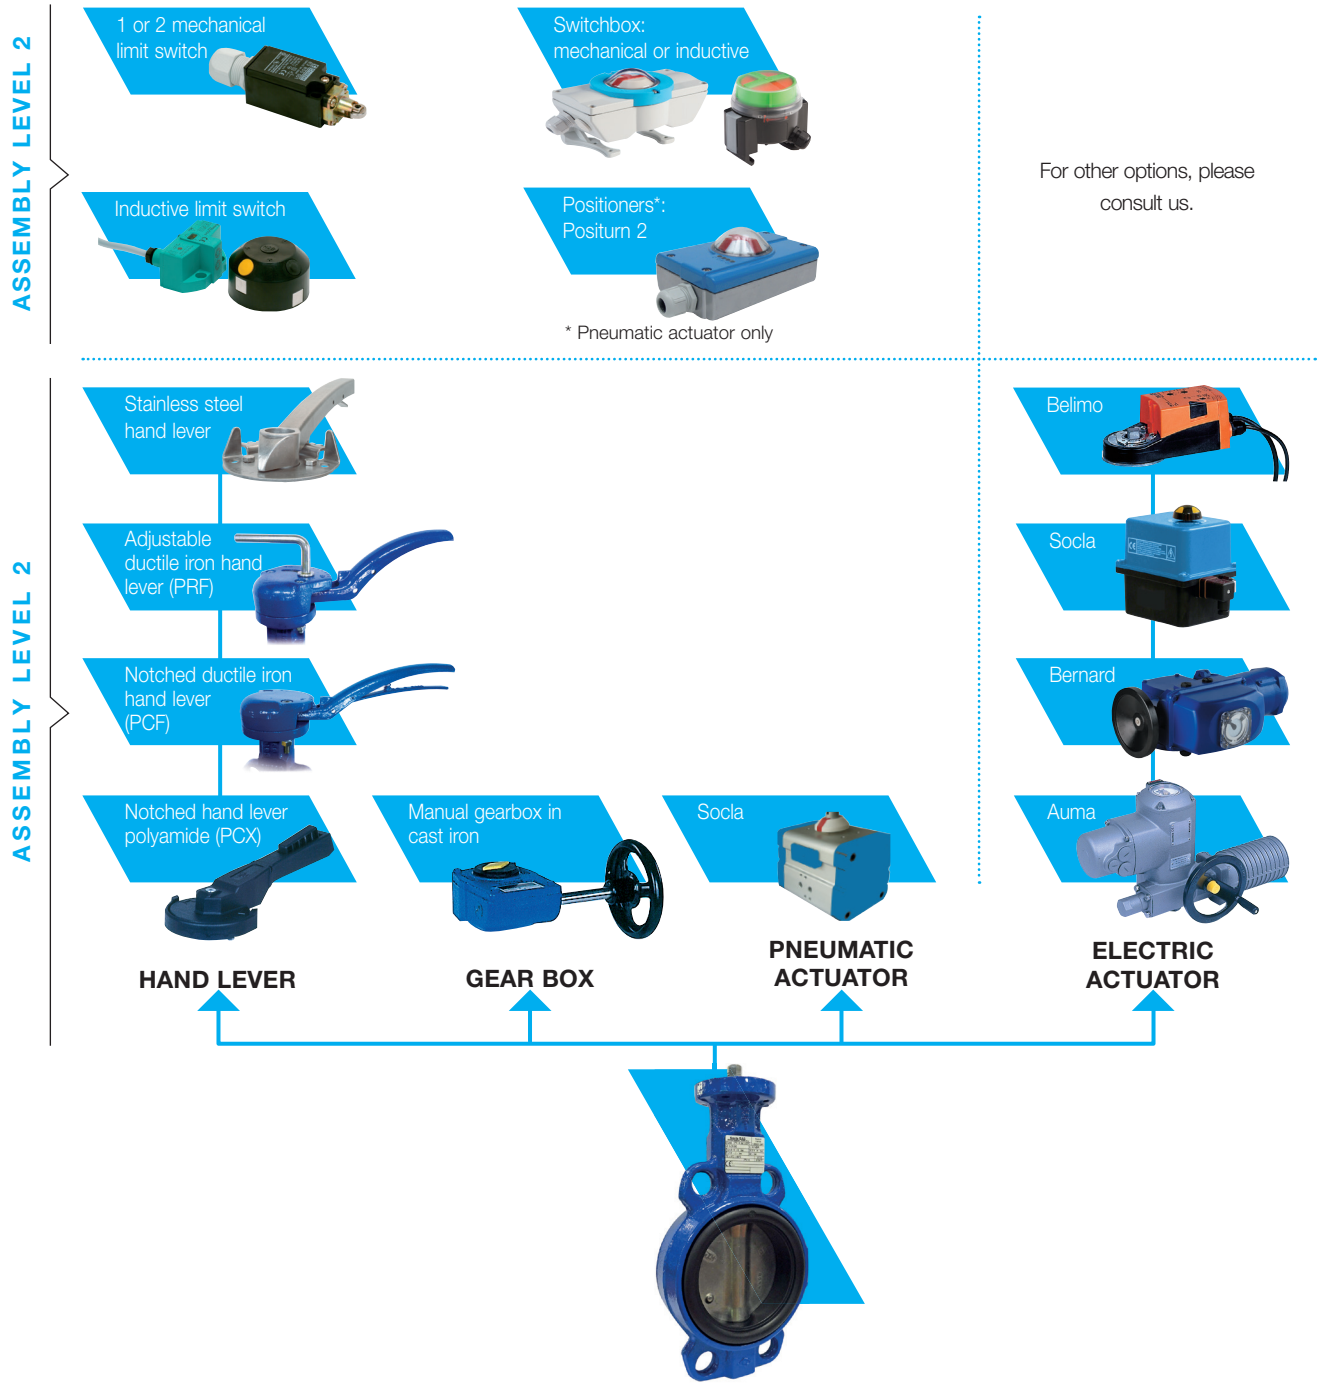

Mounting in case of downstream pipework dismantling (see page 13).

Use hexagon thin nuts between the butterfly valve and the downstream flange.

Actuations

Find below the different standard assembly combinations.
